

Security and CCTV

Peace of mind from anywhere.

REMOTE ACCESS

Log into your home or office from on the go and check what is happening as well as view recorded events

INTERCOMS

Pressbutton intercom systems for video or voice are a handy addition to identify who is at the gate or door.

FREE SECURITY AUDIT

Have EASE conduct an audit to see if your current system is fit for purpose.. We can check your system for vulnerabilities and offer the appropriate solution.

Protect you assets and family with a professionally installed alarm system. For homes, commercial, retail or office situations we can create the correct alarm system suited to you. Our alarms are much more than four motion sensors connected to a siren. With our range of products we put together a custom solution designed for your needs. You can have alarms triggered by any events including smoke alarms, doors or windows opening, and even sensors such as water level or temperature.

When an alarm is triggered you can have your smartphone receive a notification or call , have the alarm send a code to a monitoring company, or just wake the neighbourhood.

Existing buildings can pose challenges for installing new cabling, to get around this we have wireless solutions that off the same high level of security.

An Alarm System compliments an Access Control system. Access control can have many applications in the home and business. Some examples are to control the movement of staff members though a building or to open a front gate. Access can be controlled wirelessly, by PIN code or by a key tag, or even a combination if needed.

Being able to see live and recorded events around your property provides an extra level of functionality. With the correct equipment you can identify details such as people, cars and number plates, this information significantly increases the chance of recovering any property that may have been taken.
